

## **Manuscript submission**

By submitting a manuscript authors warrant that their contribution to the Journal is their original work, that it has not been published before, that it is not under consideration for publication elsewhere, and that its publication has been approved by all co-authors, if any, and tacitly or explicitly by the responsible authorities at the institution where the work was carried out.

Authors are exclusively responsible for the contents of their submissions, the validity of the experimental results and must make sure that they have permission from all involved parties to make the data public.

Authors wishing to include figures or text passages that have already been published elsewhere are required to obtain permission from the copyright holder(s) and to include evidence that such permission has been granted when submitting their papers. Any material received without such evidence will be assumed to originate from the authors.

Authors must make sure that all only contributors who have significantly contributed to the submission are listed as authors and, conversely, that all contributors who have significantly contributed to the submission are listed as authors.

Manuscript should be sent to:  
Rodoljub D. Simović  
Editor-in-Chief  
Vinča Institute of Nuclear Sciences  
Belgrade, Serbia  
E-mail: simovicr@vinca.rs

Manuscripts will be pre-evaluated at the Editorial Office in order to check whether they meet the basic publishing requirements and quality standards. They are also screened for plagiarism.

Authors will be notified by email upon receiving their submission. Only those contributions which conform to the following instructions can be accepted for peer-review. Otherwise, the manuscripts shall be returned to the authors with observations, comments and annotations.

## **Manuscript preparation**

Authors must follow the instructions for authors strictly, failing which the manuscripts would be rejected without review.

When preparing a manuscript authors should obey the following recommendations:

Submitted paper should be written in English only, with the title and abstract translated to Serbian (for foreign contributors translation to Serbian will be provided by the Editorial Board).

The manuscripts should be submitted in Word for Windows (doc, docx). A separate sheet should include data about authors: name, initial of middle name, family name, title, full postal

address, E-mail address, and phone number. In case of more than one author the address and name of the corresponding author should be marked.

Title of the paper should denote the brief contents and it should be easy to identify in bibliography. Full name, initial of middle name and family name of the author should be written with the family name in capital letters. A short abstract of not more than 200 words should follow the title. The key words should be cited after the abstract. The text of the manuscript should follow a logical and clear plan.

Reasons for presenting the paper and relation to similar previous papers should be presented in the introduction. Methods and procedures proposed in scientific papers should be described in such a way to enable the reader to repeat them. Results and discussion, as well as conclusions and recommendations should be presented separately. A review of applied denotations might be given at the end before citing the references. Footnotes should be omitted.

Manuscripts should be correct in style and language without typing errors. Formulae and mathematical symbols must be legible. Formulae should be numbered in ordinary brackets and given only to such extent to enable comprehension.

Scanned pictures (or photographs) should be sent as a separate JPG, TIF, or PCX file, not wider than 150 mm to be printed in one column or 320 mm if printed on the whole page width. Letters in the figures should be 3 mm high because of zooming the figures to 50%, line thickness should not be less than 0.2 mm. Photographs should be avoided but if indispensable they should be of high quality.

All the figures should be numbered. They should be referred to in text with respective numbers.

International SI system must be applied for all physical data. Data in tables should be full titles and precisely indicated measures. All the tables should be numbered.

The references should be cited as follows: number within square brackets corresponding to the number in the text, family's names and first letters of the authors' names, title of the reference in English, followed by data which enable the cited paper to be found. For papers published in journals the name of the journal in italic, volume in italic and the year of publishing in ordinary brackets, number of the issue in the volume and numbers of pages in the issue should be written.

In case of books the title in italic should be followed by the name of the publisher, place and the year of publishing, and the number of pages in the book. For conference proceedings the title of the proceedings and names of the editors in ordinary brackets should be written.

Acknowledgements and Authors' contributions should be included in separate sections at the end of article before the references.
